Summary

Backend SDE with 2 years of experience building, deploying, and operating production systems handling real financial transactions across India's banking ecosystem. Proficient in NestJS, PostgreSQL, REST API design, event-driven architecture, and AWS. Hands-on with Linux server administration, CI/CD pipelines, and production observability. Consistently takes ownership from design through live incident resolution with minimal supervision.

Experience

Proxgy

June 2024 – Present

Software Development Engineer

Gurgaon, Haryana

- Re-architected the Operations platform from a monolithic codebase to a unified multi-bank dashboard with decoupled modules, cutting support turnaround by **50%** and enabling concurrent ops across **5+ bank partners** (SBI, BOB, BOI, CBI, BOM) from a single interface.
- Integrated DTDC & Professional Couriers with end-to-end manifest generation, AWB printing, and POD download, routing **~95% of shipments** through the portal and reducing manual booking to exception cases only.
- Designed and built **Merchant Tracker**: cron-driven delta sync via **sync_version** from on-prem soundbox backend, lot management, audit logs, IMEI masking, manual status override APIs, and automated CSV reports, deployed across CBI, BOI, and BOM.
- Built end-to-end **RTO (Return to Origin) lifecycle**: status state machine, automated entry creation via delivery partner webhooks, alternate-partner re-dispatch logic, real-time ops visibility, and export reports that closed revenue leakage on lost/returned devices.
- Implemented **granular role-based ACL** across the Ops platform (Superadmin, L1, L2, Firmware, Dispatch, QA) using NestJS guards, with per-role feature visibility scoped independently per bank partner.
- Led **SBI Vendor & Lot Management** modules and integrated **Vodafone Idea telecom APIs** for SIM lifecycle automation (bulk upload **29,500+ SIMs**, data usage tracking, auth), enabling a **10-lakh device deployment pipeline** that was demoed directly to senior SBI stakeholders.
- Boosted API response times by **650%** ($\sim 1400\text{ms} \rightarrow \sim 200\text{ms}$) through PostgreSQL query optimisation and targeted indexing; set up **Prometheus + Grafana + AlertManager** with custom partner-activity and device-health metrics, and authored SOPs and RCAs for critical production incidents.
- Architected and deployed a **serverless thumbnail generation pipeline** for SmartHat backend using **AWS Lambda + FFmpeg**, triggered on S3 video upload events. This offloaded compute-heavy media processing entirely from the application server, a deliberate system design decision to keep backend latency unaffected.
- Administer **Bank of India on-premise soundbox servers** over terminal-only (SSH + SFTP) access, managing deployments, debugging live issues with Linux tooling, and independently handling SSL certificate lifecycle including **CSR generation, CA signing, and server reinstatement** for expired certificates in production.

Projects

OrbitLab – Satellite Tracking System | [FastAPI](#), [PostgreSQL](#), [CesiumJS](#)

July 2025

- Independently designed and built a full-stack ISS tracking system: **FastAPI + PostgreSQL** backend computing real-time orbital coordinates from TLE data via the SGP4 propagation model, exposing optimised APIs for live tracking and orbit prediction.
- Built a **3D React + CesiumJS** frontend with orbit trails, lead path projection, ground shadow, and auto-follow camera, demonstrating full-stack ownership and system design thinking outside of work.

Sarcasm Detection | Report

Jan 2023 – Jun 2024

- Built a sarcasm classifier using **Bi-Directional LSTM + Multi-head Self-Attention** achieving **93% accuracy** vs. 51% NLTK baseline; trained on a self-built dataset of sarcastic comments and synthetic GIFs generated via Generative AI on an **NVIDIA DGX cluster**.

Technical Skills

Languages: TypeScript, Python, SQL, C++, Java, JavaScript

Backend & Tools: NestJS, ExpressJS, FastAPI, REST APIs, MQTT, PostgreSQL, Docker, Jenkins, GitHub Actions, Postman

Cloud & Infra: AWS (EC2, ECS, S3, IoT Core, Lambda, FFmpeg), Linux Server Admin (SSH/SFTP), CI/CD Pipelines

Observability: Prometheus, Grafana, AlertManager, Pino, Sentry

Other: React, TensorFlow/Keras, Confluence, Jira, Agile

Education

Mahindra University

2020 – 2024

Bachelor of Technology in Computer Science Engineering

Hyderabad, Telangana

Leadership / Extracurricular

Head of The Media Club

Aug 2022 – Sep 2023

Mahindra University, Official Photography & Videography Club

- Led a cross-disciplinary team of **40+ students**, managing end-to-end media production for campus events, conferences, and the official after-movie for university-wide fests Aether & Airo.
